 pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Down-regulation or out-competition of MIO function may be used to stimulate a defence response in transgenic plants conferring increased pathogen resistance, especially resistance to powdery mildew or rust. The product can also be used for identifying compounds able to stimulate a defence response in a plant by interaction with

                                                                                                                                                                                                                                                                                                                                                              The present sequence is the barley Mlo sequence. Mlo confers resistance to Erysiphe graminis f. sp. hordel upon the plant, and its inactivation leads to the priming of disease resistance even if the pathogen is not present. The protein, and its gene, can be used to create transgenic plants which have increased disease resistance, as well as allowing researchers to find other resistance-conferring genes and proteins. This sequence was used for this purpose, and potential homologues were obtained in wheat, soybean and rice.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            17-DEC-1999;

                                                                                                                                                                                                                                                                                                                                                The sequence is that encoded by the MLO gene, wild-type Mlo exerts a negative regulatory function on a pathogen defence response, such that mutants exhibit a defence response in the absence of pathogen bown-regulation or out-competition of Mlo function may be used to stimulate a defence response in transgenic plants conferring increased pathogen resistance, especially resistance to powdery mildew or rust. The product can also be used for identifying compounds able to stimulate a defence response in a plant by interaction with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bueschges R,

                  The present sequence is a putative protein sequence for a Mlo homologue from wheat. Its coding sequence was identified by searching a root and leaf cDNA library for sequences encoding proteins similar to Mlo from Hordeum vulgare (barley) and Arabidopsis thaliana. Mlo confers resistance to Erysiphe graminis f. sp. hordei upon the plant, and its inactivation leads to the prining of disease resistance vote to present. The gene and protein can be used to create transgenic plants which have increased disease resistance, as well as allowing researchers to find other resistance-conferring genes and proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAB01805 standard;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
This sequence represents the wheat fungal resistance protein TrMlol, which confers resistance to fungal pathogens by stimulating the formation of large cell wall appositions, designated papillae, at the contact site with the fungal pathogen. These papillae mainly contain callose, but also contain carbohydrate, phenols and proteins and are used to prevent penetration of the fungal hyphae into the plant. The new Mio sequences
